

Enterprise Digital Transformation Program — Stakeholder Engagement Plan

Portfolio simulation • fully populated program-management artifact

Stakeholder Strategy

Stakeholders are segmented by decision authority, operational impact, influence, and change intensity. Communication is designed around the decision or behavior required rather than generic status distribution.

Stakeholder Matrix

Stakeholder Group	Influence	Impact	Need	Engagement	Owner
Executive Sponsor	High	High	Outcome, funding, major risk visibility	Monthly steering + ad hoc escalation	Program Manager
Business Owners	High	High	Readiness, benefits, process decisions	Biweekly working session	Business Lead
Technology / Delivery Leads	High	High	Dependencies, capacity, architecture, defects	Weekly integrated review	Program Manager
Operations / Support	Medium	High	Runbooks, support model, transition	Weekly during release window	Operations Lead
End Users / Frontline Teams	Medium	High	What changes, when, training, support	Role-based campaign + training	Change Lead
Risk / Compliance / Security	High	Medium	Controls, evidence, acceptance criteria	Gate reviews + monthly reporting	Control Lead
Finance / PMO	Medium	Medium	Actuals, forecast, benefits, governance	Monthly financial review	Program Manager

Communication Standards

- Every communication states audience, purpose, decision/action required, owner, due date, and source of truth.
- Executive reporting uses exceptions, trends, forecast, business impact, and decisions—not task-level detail.
- Change communications are sequenced before training and release, with reinforcement during hypercare.
